No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description

NBDO human cDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; cDNA full insert sequencing:

Research Association for Biotechnology (RAB); cDNA library

construction: Halix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET

ö
                  genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET nucleic acid of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; GSSP3; circulating blood glucose level; insulin sensitivity; body mass; serum glucose regulation; body weight loss; obesity; metabolic-related disorder; impaired glucose tolerance; stroke; insulin resistance; hyperlipidaemia; atherosclerosis; heart disease; hypertension; syndrome C; type I diabetes; type II diabetes; microangiopathy; retinopathy; neuropathy; nephropathy; ocular lesion; polycystic ovarian syndrome; acanthosis migrican; leprechaunism; lipoatrophy; physical performance; exercise; dyslexia; schizophrenia; attention-deficit disorder; hyperactivity disorder; psychiatric disorder;

The present invention relates to the isolation of human GSSP3

CC polypeptide reduces circulating blood glucose levels, increases insulin

CC polypeptide reduces body mass. The GSSP3 polypeptide and

CC polypeptide reduces body mass. The GSSP3 polypeptide and

CC compositionty, and/or reduces body mass. The GSSP3 polypeptide and

CC compositions comprising GSSP3 polypeptides are useful for controlling

CC compositions comprising GSSP3 polypeptides are useful for controlling

CC plood glucose levels, for treating metabolic-related diseases or

CC disorders (e.g. obesity, impaired glucose tolerance, insulin resistance,

CC disorders (rype I or II diabetes, diabetes related complications,

CC hyperlipidaemias, atheroselerorais, heart disease, hypertension, stroke,

CC hyperlipidaemias, atheroseleropathy, nephropathy, polycystic ovarian

CC microangiopathy, retinopathy, neuropathy, nephropathy, polycystic ovarian

CC syndrome, ocular lesions, microangiopathic lesions, or syndromes such as

CC acanthosis nigricans, leprechaunism and lipoatrophy). The polypeptides

CC are also useful to improve physical performance during work or exercise,

and to treat dyslexia, attention-deficit disorder, attention-

CC deficit hyperacentivity disorder, and psychiatric disorders such as

CC schipper and contains and c

comprising a promoter sequence operably linked to the CGDD
comprising a promoter sequence operably linked to the CGDD
comprising a promoter sequence operably linked to the CGDD
comprising a promoter sequence operably linked to the CGDD
comprising a promoter sequence operably linked to the CGDD
comprising a promoter sequence operably linked to the CGDD
comprising a promoter sequence operably linked to the CGDD
comprising of cGDD or alter the expression of CGDD polymucleotide, an anti-
cGD polymucleotide microarray. The polypeptides, polymucleotide and a
cGDD polymucleotide microarray. The polypeptides, polymucleotide and a
cGDD polymucleotide microarray. The polypeptides, polymucleotides,
agonists and antagonists are useful for diagnosing, treating or
cGDD polymucleotide microarray. The polypeptides, polymucleotides,
cGDD polymucleotide microarray. The polypeptides, polymucleotides,
agonists and antagonists are useful for diagnosing, treating or
cGDD polymucleotide microarray. The polypeptides, polymucleotides,
cgnowenting disorders associated with aberrant expression of CGDD,
carrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia
cycle, particularly cell proliferative (e.g. arteriosclerosis, atheroaclerosis,
cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia
cycle, gineral tubular acidosis, anaemia or mental retardation),
contact defense (e.g. affatishment of assease, diabetes mellitus,
cycle osteoporosis, primitable bowel syndrome, multiple sclerosis,
costeoarthritis, or viral, bacterial, fungal, parasitic, procazol or helminthic
cinfections. They are also useful in the assessment of the effects of
condense of proteins associated with CGDD. The present sequence encodes

                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to the isolation of genes (AAC69512-C69587)

encoding 62 human secreted proteins (AAB38321-B38396). The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G FC portion (AAC69503) for increasing the stability of the fusion protein as compared to the human protein only. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, proteins, and prevention of: (a) autoimmune diseases e.g. cheumatoid arthritis; (b) hyperproliferative disorders e.g. neoplasms of the breast or liver; (c) cardiovascular disorders e.g. cardiac arrest; (d) cerebrovascular disorders e.g. cardiac arrest; (d) cerebrovascular disorders e.g. cerebral isolations system disorders e.g. disease; (g) infections caused by bacteria, viruses and fung; and (h) ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging cell culture of primary tissues, to regenerate tissues and in chemotaxis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 CATGTGAAAATAAGTTGCTCTCTGGACTGGTTGATGGTCTCAGTTATCCCAGTTGCAGAA 120

The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest coronary arrestosclerosis and myocardial ischaemia), neural disorders, immune arteriosclerosis and myocardial ischaemia), neural disorders, immune system disorders, pulmonary disorders, renal disorders, for proliferative disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and Parkinson's disease, to enhance bone and periodontal regeneration and aid in tissue transplants or bone grafts, to prevent skin aging or hair loss, to

AB271190-AB271478 represent cDNAs corresponding to 178 human secreted brotein genes, and ABP00011-ABP00299 represent the proteins they encode. CC protein genes, and ABP00011-ABP00299 represent the proteins they encode. AB271479-AB2714540 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, ct. the use of the secreted proteins and recombinant controls and lost cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing digestive disorders. Such conditions include disorders of the mouth, costophagus, stomach, small intestine, large intestine, liver, biliary tract and panoreas, and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the treatment of immune disorders, inflammation, inflection, chromosome of the invention may be used for chromosome identification, chromosome contents of the invention may be used for chromosome identification, chromosome biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                254
